Казалось бы, такой подход создателей наскучит, но на самом деле от игры трудно оторваться. Геймплей заключается в выполнении прыжка в определенных локациях, are ordinary urban facilities and premises: parking, parking, Ports, etc., each require a series of tests. Three attempts are given for each jump. But this disadvantage is offset by a great physical model. The control is done with only one button responsible for four operations at once: squat, jump, grouping and landing. The main problem in finding the necessary balance between four clicks going looking for each other lies the key to a successful jump. There is a hero pumping system and an assessment of acrobatic abilities. Backflip Madness is a great example of a project that attracts attention not with a beautiful image, but with the simplicity and development of a physical model. Fans of non-standard simulators will appeal. Simulation.
